Second candle test: does "buy the 2nd candle" give ₹10?

A simple rule many beginners use: wait for the day's second 5-minute candle to close; if it is green, buy; if red, sell short; aim for ₹10 a share. This tab measures the rule on every stock and past day you pick: how far the trade went, how far it went against you first, and what a target, a stop or a trailing stop would have made.

The rule in one line

The first candle of the day (09:15-09:20) is wild. The second (09:20-09:25) shows the real direction. Trade with it at 09:25, with the busiest stocks of the day (highest volume vs usual) first.

1. The picture: one trade, measured

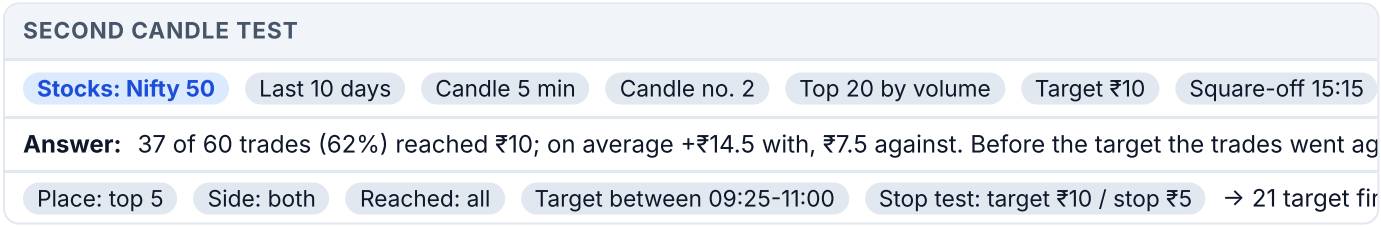

What the test records for this trade: went against you ₹2.60 before the target (so a ₹3 stop survived, a ₹2 stop did not), reached ₹10 at 10:50, the best it ever gave was ₹18.40 at 11:30, and holding to the square-off gave ₹12.50.

2. What each number means

NUMBER	MEANING	WHY YOU CARE
Vol vs usual / Place	Volume vs usual at the signal candle's close, and the stock's rank among that day's stocks by it.	The owner's routine takes the busiest stocks first; the *Place* filter shows whether the top 5 do better than the rest.
Side	LONG after a green 2nd candle, SHORT after a red one. A doji (no body) or a tiny body is skipped.	
With the trade (best)	The most the price went your way, in ₹ and %, and when.	How much was on the table.
Against (worst)	The most it went against you, and when.	Where a stop would have been hit.
Reached / minutes to target	Whether the ₹ target was reached and after how many minutes.	The hit rate of the rule.
Against before target	How far it went against you **before** it reached the target.	The stop a winning trade needed: the most useful number here.
Square-off ₹	What holding to 15:15 would have made.	The do-nothing alternative.
Trail columns	What a trailing stop of 0.25 %, 0.5 % ... of the entry behind the best price would have made, judged on 1-minute candles the cautious way.	Which trail distance keeps the gains.

3. How to use it

1. Pick the **stocks**, the number of **days** (10-20 to trust a percentage), the candle size and **which candle** (the 2nd by default), the **target** and the trailing distances. Press **Run the test** after hours (on the desk it is refused in market hours unless backtests are allowed then).
2. Read the **answer lines** first: hit rate, average with / against, against-before-target, the best trailing stop and the best stop for your target.
3. Use the **filters**: Place (top 5 / 10 / 20 by volume), Side, Day, Reached, time windows. Every number recomputes from the rows, so you can ask "do the top 5 by volume do better?" in one click.
4. Try the **target + stop test**: type any target and stop; the table says how many hit the target first, the stop first, or neither, and the total ₹ a share. The per-level minute grids make this instant.
5. Sort the **per-stock table** to see which stocks the rule suits; **Arm ticked** puts them on a practice bot. To trade the rule itself, set the bot's *Enter on: Second candle* in Settings (its own lesson).

4. Reading the example above

62 % of trades reached ₹10 and the average trade went ₹14.5 with you but ₹7.5 against. The key line: **before reaching the target the winners went against you ₹2.8 on average and ₹6.5 at most**. A ₹3 stop would have cut many winners; a ₹8 stop would have kept them (the best-stop table confirms ₹8). The trailing table says a 0.75 % trail (₹7.50 on a ₹1,000 stock) kept the most of the ₹14.5 average. So the owner's rule, with a ₹8 stop and a 0.75 % trail, would have made about ₹41 a share over these 60 trades, versus ₹36 holding to the square-off.

Before you trust it

Ten days is the minimum; twenty is better. One wild day (a budget day, a result day) can make a rule look brilliant or hopeless. Check the *By day* table: a rule that only won on one day is not a rule.

5. Benefits and limits

Why it helps

- Turns "I think the second candle works" into numbers on your own stocks and days.
- Tells you the stop a winner needed, which no chart shows.
- Any target / stop pair is judged without a new run.

Limits

- Fills are assumed at the next candle's open; real fills slip a little.
- No charges are taken off the ₹ a share; a ₹2 win is a loss after charges.
- Practice arithmetic only; nothing is ordered.

6. Words used here

Second candle

The 09:20-09:25 candle on 5-minute candles. Green = buy, red = sell short, at its close.

Volume vs usual

Shares traded by the signal candle's close against the same minutes on earlier days.

Against before target

How far the trade went against you before it reached the target: the stop a winner needed.

Trailing stop

A stop that follows the best price at a fixed distance and never moves back.

Square-off

Closing the trade at 15:15 whatever the price.

Practice money and candles only: nothing on the Scalp page places an order. The bots trade only the stocks you arm, in PAPER (practice) mode unless you switch one to LIVE yourself.
